

Executive Summary

Workshop on Co-creating digital solutions for older people

This workshop focusses on the co-creation of SHAPES pilot 1, focusing on smart living environment for healthy ageing at home, together with experts from the digital health care ecosystem. These are representatives of health and government, academia, industry and civil societies. In this joint discussion, we are looking for insights into the needs of older people in order to provide solutions that enable a sustainable and independent life for them.

During this session of the first SHAPES dialogue Workshop, we will perform four separate virtual sessions that build on one another and deal with the following topics: (1) the needs of older people in rural areas, (2) potential digital solutions, (3) how to sustainably integrate these solutions, and (4) key challenges for a successful implementation.

Each session will last 45 minutes and will involve around 20 participants. The session will cover an introduction to the topics, brainstorming, discussion and evaluation of results.
